Registration with the SEC does not imply a certain level of skill or training.

Strategy

The All Cap Growth SMA strategy invests in a diversified portfolio of small-, mid- and large-capitalization companies of high quality that demonstrate sustainable growth characteristics.

Performance and Fees

Past performance is not indicative of future returns. Performance is shown in U.S. dollar unless otherwise noted. Returns for periods greater than one year are annualized. Performance results assume the reinvestment of dividends and capital gains. Gross investment performance is shown gross of all fees and transaction costs. Net of fee results are calculated using the wrap program's maximum fee of 3.00%. This bundled (wrap) fee includes investment advisory fees, financial consultant fees, custodial fees, and trading expenses.

Risk

The Strategy's returns will vary, and you could lose money by investing in the Strategy. The value and/or returns of a portfolio will fluctuate with market and economic conditions. Historically, small and/or mid-cap stocks have been more volatile than the stocks of larger, more established companies. Smaller companies may have limited resources, product lines and markets, and their securities may trade less frequently and in more limited volumes than those of larger companies. There is no guarantee that the investment objectives will be met. Dividends and yields represent past performance and there is no guarantee that they will continue to be paid.

Benchmark

The Russell 3000 Growth Index is an unmanaged index comprised of those Russell 3000 companies with higher price-to-book ratios and higher forecasted growth values. The Russell 3000 Index is an unmanaged index generally representative of the U.S. market for large domestic stocks as determined by total market capitalization, which represents approximately 98% of the investable U.S. equity market.

Summary & Outlook

March 31, 2025

Market Overview

U.S. equity indices experienced a downturn in the first quarter of 2025. Weakness in the market was primarily driven by increasing fears around economic growth and uncertainty around the new administration's tariff policy. While positive economic indicators such as strong employment and easing inflation in January and February offered some support, rising investor caution exacerbated by policy uncertainty drove market declines. U.S. corporate earnings growth was generally healthy, with continued outsized growth and planned capital expenditures among mega-cap technology companies. However, concerns that the AI growth narrative could be upended by competitors like DeepSeek spurred a retrenchment among the "Magnificent Seven," which had an outsized effect on the returns of the large cap indices in the quarter. Ultimately, despite healthy earnings and continued employment strength, economic growth fears and tariff policy uncertainty were the primary drivers of negative performance across U.S. equity indices.

Portfolio Performance

The William Blair All Cap Growth SMA Strategy underperformed its benchmark, the Russell 3000 Growth Index, during the first quarter.

The All Cap Growth portfolio underperformed the Russell 3000 Growth Index during the first quarter, primarily driven by stock-specific dynamics. Our underweight to the highest dividend yielding stocks served as a modest headwind as well. Our top detractors included ACV Auctions (Industrials), West Pharmaceuticals (Health Care) and e.l.f. Beauty (Consumer Staples), as well as not owning Eli Lilly (Health Care). ACV Auctions' stock price declined following management's guidance for the dealer wholesale market that was below elevated expectations, while shares of e.l.f. Beauty, a seller of premium quality cosmetic and skincare products, declined on disappointing new product innovations and tariff headwinds. Stock selection in Information Technology,

including our positions in EPAM Systems and ServiceNow, also detracted from performance. Our top contributors included Abbott Laboratories (Health Care), United HealthGroup (Health Care), Bright Horizons (Consumer Discretionary), Baldwin Insurance (Financials), and Walmart (Consumer Staples). Additionally, not owning Tesla (Consumer Discretionary), was also additive to relative performance. Abbott Laboratories, a provider of a broad range of health care products, outperformed after delivering strong results from its Diabetes and Structural Health businesses, while UnitedHealth Group, illustrated defensive resilience in the risk-off backdrop.

Outlook

As of the end of the first quarter, the underlying economy remained stable, driven by favorable employment trends and steady economic growth. However, investor sentiment has turned cautious due to evolving narratives around AI and the new administration's policy announcements. While potential pro-growth policies from the new administration could stimulate economic activity and benefit domestically oriented businesses, the inflationary risks associated with new tariffs remain a prominent concern. Moreover, escalating geopolitical tensions and rising government debt pose potential headwinds to economic growth and corporate earnings.

Our investment philosophy focuses on finding durable businesses through bottom-up, fundamental analysis. We seek companies with superior management, significant competitive advantages, and differentiated products and services, whose stock prices are not reflective of their long-term fundamental expectations. We believe our focus on durable businesses with compelling risk-reward profiles positions us to successfully navigate a multitude of economic regimes.

Market Performance

Periods Ending March 31, 2025

	Value	Core	Growth
Month to Date			
Russell 3000	-2.93	-5.83	-8.36
Russell 1000	-2.78	-5.79	-8.42
Russell Midcap	-3.68	-4.63	-7.41
Russell 2500	-5.44	-6.27	-7.96
Russell 2000	-6.00	-6.81	-7.58
Quarter to Date			
Russell 3000	1.64	-4.72	-10.00
Russell 1000	2.14	-4.49	-9.97
Russell Midcap	-2.11	-3.40	-7.12
Russell 2500	-5.83	-7.50	-10.80
Russell 2000	-7.74	-9.48	-11.12
Year to Date			
Russell 3000	1.64	-4.72	-10.00
Russell 1000	2.14	-4.49	-9.97
Russell Midcap	-2.11	-3.40	-7.12
Russell 2500	-5.83	-7.50	-10.80
Russell 2000	-7.74	-9.48	-11.12

Market Performance

- US equities moved lower with major indices like the S&P 500 and Russell 2000 enduring their worst quarterly performances since 2022.
- Weakness in the market was primarily driven by increasing fears around economic growth, uncertainty around the new administration's tariffs, and concerns that the AI growth narrative could be upended by competitors like DeepSeek.
- While positive economic indicators such as strong employment and easing inflation in January and February offered some support, a confluence of weakening hard data, declining soft data, and rising investor caution exacerbated the market declines late in the period.

Style Performance

- In March and the first quarter, value indices outperformed growth indices across the market cap spectrum, with a more significant spread in the larger cap segments.

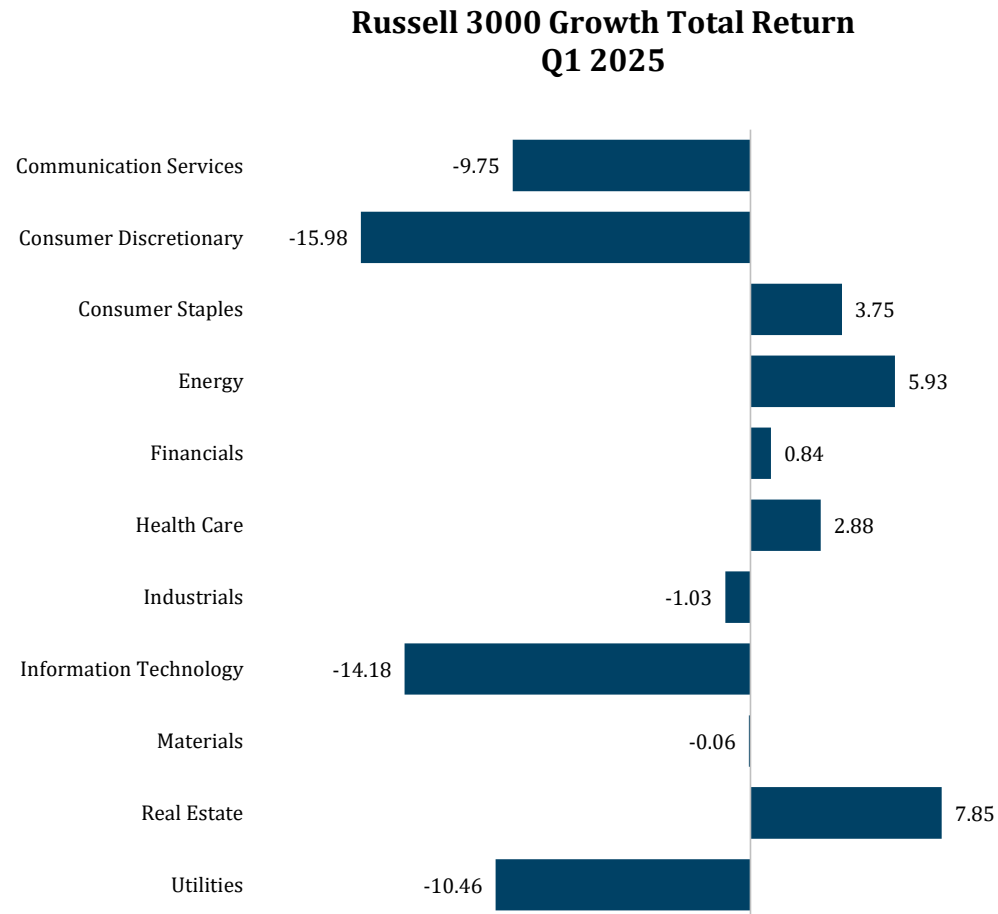

Market Cap Performance

- In March and the first quarter, larger caps outperformed smaller caps in the value indices, while the dispersion across the market cap spectrum was narrow in the growth indices.

Performance data calculated in Eagle.

All Cap Growth SMA Strategy

Performance for periods ending March 31, 2025

Composite Performance (%)	Qtr	1 Yr	Annualized			Since Inception (Oct 1 99)
			3 Yr	5 Yr	10 Yr	
All Cap Growth SMA (Gross of fees)	-12.33	-1.45	6.41	16.44	12.87	8.70
All Cap Growth SMA (Net of fees)	-13.01	-4.37	3.28	13.03	9.56	5.52
Russell 3000 Growth Index	-10.00	7.18	9.63	19.57	14.55	8.06

March 2025 performance is preliminary.

Past performance is not indicative of future returns. Performance is shown in U.S. dollar unless otherwise noted. Returns for periods greater than one year are annualized. Gross investment performance is shown gross of all fees and transaction costs and assumes the reinvestment of dividends and capital. Net investment performance represents the deduction of all fees charged directly or indirectly to the accounts. Net of fee results are calculated using the wrap program's maximum fee of 3.00%. Investment management fees are described in William Blair's Form ADV Part 2A. The Russell 3000 Growth Index is an unmanaged index registered to Russell/Mellon. It measures those Russell 3000 companies with higher price-to-book ratios and higher forecasted growth values. It is a capitalization-weighted index as calculated by Russell on a total return basis with dividends reinvested. Investing in smaller companies involves special risks, including higher volatility and lower liquidity. Please see GIPS Composite Report in appendix for a complete description of the composite.

All Cap Growth Attribution

QTD Contributors

- Top contributors: Abbot Laboratories (Health Care), UnitedHealth Group (Health Care), Baldwin Insurance (Financials), Bright Horizons (Consumer Discretionary), and Walmart (Consumer Staples)
- Not owning Tesla (Consumer Discretionary)

QTD Detractors

- Top detractors: ACV Auctions (Industrials), West Pharmaceuticals (Health Care) and e.l.f. Beauty (Consumer Staples), as well as not owning Eli Lilly (Health Care)
- Stock selection in Information Technology including Epam Systems and ServiceNow
- Our underweight to the highest dividend yielding stocks was a modest headwind

2024 Contributors

- Top contributors: Vital Farms (Consumer Staples), Pure Storage (Information Technology), NVIDIA (Information Technology), Doximity (Health Care), as well as our underweight to Apple (Information Technology)
- Not owning Adobe (Information Technology)

2024 Detractors

- Top detractors: New Fortress (Energy), Five Below (Consumer Discretionary), UnitedHealth Group (Health Care), Advanced Micro Devices (Information Technology) and Green Plains (Energy)
- Not owning Broadcom (Information Technology), Meta Platforms (Communication Services) and Tesla (Consumer Discretionary)
- Our typical bias toward small and mid caps was a headwind

Portfolio Analysis

Q1 2025 Average Weights

Q1 2025 Attribution Analysis

Total returns for the representative portfolio: Gross of Fee = -12.35 and Net of Fee = -12.99

Net returns are based on a model fee equal to the maximum separate account management fee for the strategy as of the time the return was calculated.

As of March 31, 2025.

Data calculated in our proprietary attribution system. Sector diversification calculated by William Blair based on Global Industry Classification Sectors (GICS). Weights may vary over time as benchmark index weights shift. Attribution effects are calculated with gross of fee portfolio performance using the Selection Plus methodology.

Past performance is not indicative of future returns. The data shown above is based on the strategy's representative portfolio. Gross investment performance assumes reinvestment of dividends and capital gains, is gross of investment management fees and transaction costs. Performance results will be reduced by the fees incurred. Attribution by segment is based on estimated returns of all equities held during a measurement period, including purchases and sales. Please refer to the performance summary slide for complete composite performance, including net of fees returns.

Glossary – Terms

Active Share: A measure of the percentage of stock holdings in a manager's portfolio that differ from the benchmark index.

Alpha: A measure of a portfolio's return in excess of the market return, after both have been adjusted for risk. It is a mathematical estimate of the amount of return expected from a portfolio above and beyond the market return at any point in time. For example, an alpha of 1.25 indicates that a stock is projected to rise 1.25% in price in a year over the return of the market, or the return when the market return is zero. When an investment price is low relative to its alpha, it is undervalued, and considered a good selection.

Beta: A quantitative measure of the volatility of the portfolio relative to the overall market, represented by a comparable benchmark. A beta above 1 is more volatile than the overall market, while a beta below 1 is less volatile, and could be expected to rise and fall more slowly than the market.

CFROI (Cash Flow Return on Invested Capital): A measure of how effectively a company generates cash flow based on legacy capital investment.

Convexity: A measure of the sensitivity of a fixed income investment's duration to changes in yield.

Developed Markets: Using the Morgan Stanley Capital International (MSCI) geographic definition, this region includes: United Kingdom, Europe (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Netherlands, Norway, Spain, Sweden and Switzerland), Japan, Pacific Asia (Australia, Hong Kong, New Zealand, and Singapore) and the Western Hemisphere (Canada and other Americas).

Debt to Total Capital Ratio: This figure is the percentage of each company's invested capital that consists of debt. Companies with a high Debt to Total Capital level may be considered riskier. From a portfolio perspective, the portfolio Debt to Total Capital Ratio is a weighted average of the individual holdings' Debt to Total Capital Ratio.

Duration: A measure of the price sensitivity of a fixed income investment to a change in interest rates, stated in years.

Emerging Markets: Using MSCI's geographic definition, this region includes: Emerging Markets Asia (China, India, Indonesia, Malaysia, S Korea, Taiwan, and Thailand), Emerging Markets Europe, Mid-East and Africa (Czech Republic, Hungary, Poland, Russia, Turkey, Egypt, Morocco, and S Africa), and Latin America (Argentina, Brazil, Chile, Columbia, Mexico, Peru and Venezuela).

EPS Estimate Revision Breadth: A 1-month factor representing the trend in the direction of estimate changes. Range from -100% to +100%, it is calculated as the number of positive revisions minus the number of negative revisions divided by the total number of estimates.

EPS (Earnings Per Share) Growth Rate (Projected): This measure represents the weighted average of forecasted growth in earnings expected to be experienced by the stocks within the portfolio over the next year. From a portfolio perspective, the portfolio EPS Growth Rate is a weighted average of the individual holdings' EPS Growth Rate.

EPS Growth Rate (5-Year Historic): The weighted average earnings per share growth for stocks within the portfolio over the past 5 years.

EV/EBITDA (Enterprise Value/Earnings Before Interest, Taxes and Depreciation-Amortization): The EV/EBITDA ratio is useful for global comparisons because it ignores the distorting effects of individual countries' taxation policies. It's used to find attractive takeover candidates. Enterprise value is a better measure than market cap for takeovers because it takes into account the debt which the acquirer will have to assume. Therefore, a company with a low EV/EBITDA ratio can be viewed as a good takeover candidate.

EV/IC: (Enterprise Value/Invested Capital) Ratio: Enterprise Value (EV), which is market capitalization minus cash plus debt divided by Invested Capital (IC), which is the sum of common stock, preferred stock and long-term debt. This number will get you a simple multiple. If it is below 1.0, then it means that the company is selling below book value and theoretically below its liquidation value.

Frontier Markets: Less advanced capital markets in the developing world.

FX: In finance, an exchange rate is the rate at which one currency will be exchanged for another. It is also regarded as the value of one country's currency in relation to another currency.

Information Ratio: A measure of risk-adjusted return. The annualized excess return of the portfolio relative to a respective benchmark, divided by the annualized tracking error relative to that same benchmark. The higher the measure, the higher the risk-adjusted return.

Integrated: Constructs a portfolio of the top 20% of stocks based on William Blair's multi-factor composite model, which uses Earnings Trend, Momentum, Quality, and Valuation factors. The portfolio is rebalanced on a monthly basis and weights stocks based on relative market capitalization.

Net Debt to EBITDA: A measure of leverage calculated by taking interest bearing liabilities minus cash divided by earnings before interest, taxes, depreciation, and amortization.

Option-Adjusted Spread (OAS): A measure of the spread of a fixed income investment's yield relative to a benchmark, adjusted to take into account an embedded option.

PBVn (Price/Book Value) Ratio: The PBV Ratio measures the value of a company's common stock relative to its shareholder's equity. A price-to-book multiple above one means that the price of the company's common stock is higher than its common shareholder's equity. A price-to-book multiple below one means that the price of the company's common stock are less than its break-up value, and the shares may be undervalued.

PCF (Price/CashFlow): Some analysts favor the price/cash flow over the price-earnings (PE) ratio as a measure of a company's value. Cash flow is a measure of a company's financial health. It equals cash receipts minus cash payments over a given period of time.

P/E (Price/Earnings) Ratio: This is the most common measure of how expensive a stock is. Simply, it is the cost an investor in a given stock must pay per dollar of current annual earnings. A high P/E generally indicates that the market is paying more to obtain the stock because it has confidence in the company's ability to increase its earnings. Conversely, a low P/E often indicates that the market has less confidence that the company's earnings will increase rapidly or steadily, and therefore will not pay as much for its stock.

Price to Book: A stock's capitalization divided by its book value. This ratio compares the market's valuation of a company to the value of that company as indicated on its financial statements.

R-squared: A measurement of how closely the portfolio's performance correlates with the performance of its benchmark, such as the MSC AC World Free ex US Index. In other words, it is a measurement of what portion of a portfolio's performance can be explained by the performance of the overall market or index. Ranges from 0 to 1, where 0 indicates no correlation and 1 indicates perfect correlation.

Recovery Rate: The extent to which principal and interest on defaulted debt can be recovered, expressed as a percentage of face value.

Risk (Standard Deviation): A measure of the portfolio's risk. A higher standard deviation represents a greater dispersion of returns, and thus a greater amount of risk. The annualized standard deviation is calculated using monthly returns.

Silo: Constructs portfolios using the top 20% of stocks based on each of the four sub-models used to construct William Blair's composite model, then averages the returns coming from each of the four portfolios. The portfolios are rebalanced on a monthly basis and weights stocks based on relative market capitalization. (The Equal Weighted strategy equally weights the returns coming from each of the sub-portfolios; the Optimized approach weights Quality 5%, Valuation 60%, Earnings Trend 5%, and Momentum 30%. The optimization was based on a Monte-Carlo simulation that sought an optimal weighting of each sub-portfolios to achieve the highest return).

Sortino Ratio: A modification of the Sharpe ratio that differentiates harmful volatility from general volatility by taking into account the standard deviation of negative asset returns, called downside deviation. The Sortino ratio subtracts the risk-free rate of return from the portfolio's return, and then divides that by the downside deviation. A large Sortino ratio indicates there is a low probability of a large loss.

Sharpe-Ratio: A risk-adjusted measure calculated using standard deviation and excess return (Portfolio return – Risk Free Rate) to determine reward per unit of risk. The higher the Sharpe ratio, the better the portfolio's historic risk-adjusted performance.

Spread Duration: A measure of the price sensitivity of a fixed income investment to a change in credit spreads.

Tracking Error: Tracking Error measures the extent to which a portfolio tracks its benchmark. The tracking error of an index portfolio should be lower than that of an active portfolio. The tracking error will always be greater than zero if the portfolio is anything other than a replication of the benchmark.

Trailing 1-Year Turnover: This figure reflects the portfolio's trading activity by calculating the amount of the portfolio's holdings bought or sold over the prior year, expressed as a percentage of the portfolio's average market value. Turnover figures may be related to the amount of trading costs experienced by the portfolio.

Weighted Average Market Capitalization: Market capitalization refers to the total market value of each company's outstanding shares. The Weighted Average Market Capitalization for a portfolio is calculated as the average market capitalization of the stocks within the portfolio, weighted by the amount of each stock owned.

Weighted Median Market Capitalization: This calculation represents the median market capitalization of the stocks in the portfolio, weighted by the amount of each stock owned.

Yield to Maturity: A representation of the rate of return anticipated on a bond if held until its maturity.

Yield to Worst: A representation of the lowest potential yield that an investor would receive on a bond if the issuer does not default.

Glossary – Indices

MSCI (Morgan Stanley Capital International): MSCI indices are the most widely used benchmarks by global portfolio managers. MSCI offers international investors performance benchmarks for 51 national stock markets as well as regional, sector, industry group, and industry aggregations.

MSCI China All Shares Index: a free-float weighted equity index designed to capture large and mid-cap representation across China A-shares, B-shares, H-shares, Red-chips, P-chips and foreign listings (e.g. ADRs). The index aims to reflect the opportunity set of China share classes listed in Hong Kong, Shanghai, Shenzhen and outside of China.

MSCI China A Onshore Index: A free-float weighted equity index, designed to measure performance of China A share securities listed on either the Shanghai or Shenzhen Stock Exchanges.

MSCI All Country World ex-US EAFE Index: An unmanaged index that includes developed and emerging markets outside the United States.

MSCI All Country World ex-US Small Cap Index: A free float-adjusted market capitalization index designed to measure global developed and emerging market small capitalization equity performance, excluding the U.S.

MSCI EAFE Index: A free float-adjusted market capitalization index which captures large and mid cap representation across Developed Markets countries around the world, excluding the U.S. and Canada.

MSCI EAFE IMI Index: A free float-adjusted market capitalization index which captures large, mid and small cap representation across Developed Markets countries around the world, excluding the U.S. and Canada.

MSCI EAFE Growth Index: A free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. & Canada.

MSCI All Country World ex-US Index: An unmanaged index that includes developed and emerging markets, excluding the U.S.

S&P 500 Index: The Standard & Poor's 500 Index (S&P 500) is an index of 500 stocks chosen for market size, liquidity and industry grouping, among other factors. The S&P 500 is designed to be a leading indicator of U.S. equities and is meant to reflect the risk/return characteristics of the large cap universe. Companies included in the index are selected by the S&P Index Committee, a team of analysts and economists at Standard & Poor's. The S&P 500 is a market value weighted index—each stock's weight is proportionate to its market value.

A direct investment in an unmanaged index is not possible.

Disclosures:

William Blair Investment Management claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. William Blair Investment Management has been independently verified for the periods January 1, 1993 through December 31, 2024. The verification reports are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

For purposes of compliance with GIPS, the Firm is defined as all portfolios managed by William Blair Investment Management, a distinct operating unit within William Blair. William Blair Investment Management currently operates as William Blair Investment Management, LLC, an investment adviser registered with the United States Securities and Exchange Commission ("SEC") which is a separate legal entity that is distinct from William Blair & Company, L.L.C. Registration with the SEC does not imply a certain level of skill or training.

The All Cap Growth SMA strategy invests in a diversified portfolio of small-, mid- and large-capitalization companies of high quality that demonstrate sustainable growth characteristics. A portfolio manager change occurred effective 10/1/2018 and 5/1/2024. The investment strategy was not materially altered by the personnel change.

The benchmark that best reflects the composite's investment style is the Russell 3000® Growth Index, which measures the performance of those Russell 3000® companies with higher price-to-book ratios and higher forecasted growth rates.

There is no minimum initial market value requirement for this composite. New portfolios are added to the composite at the beginning of the month following the first full calendar month under management. Portfolios will be excluded from the composite the first month immediately following the last complete month of authorized management by the Firm. Portfolios are removed at the wrap total level by Vestmark, in the event of a significant cash flow, for the month during which the flow occurs. Portfolios are typically added back into the composite the following month. A portfolio is determined to have a significant cash flow if the accumulated net external flows of cash and/or securities during a month exceed the significant cash flow threshold, which is 25% of the beginning of month portfolio market value. Additional information regarding the treatment of significant cash flows is available upon request.

Performance includes the reinvestment of dividends and other earnings. Portfolio returns are calculated daily. Composite returns are calculated monthly by weighting monthly portfolio returns based on beginning of month market values. Valuations and returns are denominated in U.S. Dollars. Composite dispersion measures represent the consistency of a firm's composite performance with respect to the individual portfolio returns within a composite. The dispersion of annual returns is measured by the asset-weighted standard deviation of the gross returns in the composite. Dispersion includes only those portfolios that have been included in the composite for the entire year. The three-year annualized standard deviation measures the variability of the gross composite returns and benchmark returns over the preceding 36-month period. This statistic is not presented until there are 36 months of performance available.

Performance results are stated net of all fees charged directly or indirectly to the accounts. Net of fee results are calculated using the wrap program's maximum fee of 3.00%. This bundled (wrap) fee includes investment management fees, financial consultant fees, custodial fees, and trading expenses. Bundled fee portfolios constitute 100% of composite assets. Performance results are also stated gross of all fees and transaction costs ("Pure Gross") and are presented as supplemental data.

The All Cap Growth SMA Composite was created in October 2001. The composite performance inception date is October 1, 1999. Prior to December 2020, the composite was named All Cap Growth Wrap.

A complete list and description of firm composites and pooled funds is available upon request. Additional information regarding valuing investments, calculating performance, and preparing GIPS reports is also available upon request. Past performance is not indicative of future results.
